Popov, D. K.

THE SZILLARD-CHAMBERS EFFECT IN THE γ-QUANTUM IRRADIATION OF CHROMATES AND BICHROMATES. [1960] [7]p. 6 refs.
Order from LC or SLA mi$1.80, ph$1.80 60-16906

Trans. of Zhurn[al] Fiz[icheskoy] Khimii (USSR) 1959, v. 33 [no. 2] p. 405-410.

The possibility of concentrating Cr^{49} formed from the alkaline metal and ammonium chromates and bichromates in line with the reaction Cr^{50} (γn)Cr^{49} was demonstrated. The enrichment factor is greater than 10^4. The retention factor in the irradiated solid preparations depends upon the time passing from the dissolution of the salt and the isolation of the Cr^{49} on iron hydroxide, whereas on irradiating aqueous solutions the retention is always of zero value. On dissolution of the irradiated crystals the unstable valence forms of chromium are distributed between Cr^{3} and Cr^{6}. (Author)
